

Our Services:

- System integration
- Workflows & schedules
- Tracking & reporting
- Responsive UI design
- Email notifications
- Social networks
- Analytics
- Cloud storage
- Secure communication
- Multi-lingual
- Multi-tenant
- Content management

Benefits:

- Quick application design
- Business oriented
- Multi-device support
- Customer oriented
- Comprehensive support

**Platform Software Description**

We want to make your life easier. How? By giving you a solution that allows you to drive your business in easier and modern way. Our goal is to take maximum of the modern technologies and build IT system which suites most of your day to day, operation and strategic needs when doing business.

Our platform is set of ready to use application building blocks designed to construct secure, scalable and easily maintainable system. It also has skeleton of the web application which has both front office and back stage (administration) support. Having these components, we do not waste time on writing code of common things, we are ready to start gathering business requirements and transform them into ready to use functions of the application.

Our ultimate goal is to bring high-end software solutions to the area of various kind of small, medium and large business. We can offer small product to improve processes in the company with just one office and we can also build large scalable integrated computer system for the big companies.

System Integration

BAP gives an ability to easily integrate different kind of applications into single solution. That may include combination of legacy and new applications.

Workflows

BAP gives set of abilities to build your custom business workflows. Those can be applied to your specific business entities. There is also scheduling available.

Tracking & Logs

This has ability to monitor application activity and build ad-hoc reports around custom business entities. Result delivery via Email is available.

Responsive

We use modern web development frameworks like Bootstrap 3.0. This brings ability to build front-end application for most types of devices (including mobile).

Email Notifications

This gives ability to receive notifications about various events in the system via email. BAP gives ability to easily manage list of subscribers and types of event deliver.

Social

Here you can include social networks (e.g. Facebook, Google+, Twitter, Instagram) into workflows. This means ability to communicate with social networks from the app.

Analytics

We support Google Tag Manager as automated host for any kind of analytical tags (e.g. Google Analytics, Bing).

Cloud Storage

We use modern cloud-bases solutions to store large amounts of content. This brings better reliability and flexibility of content management.

Secure

BAP has built-in support to secure socket layer protocol (SSL) for dealing with sensitive data. This makes sure all transactions are processed in secure and reliable way.

Multi-lingual

BAP provides ability to easily develop application with multi-language support. It also gives ability to manage multi-lingual dictionaries.

Multi-tenant

BAP is built on the principles of Software as a Service (SaaS) architecture. This allows to develop application where multiple customers can use it independently.

CMS

BAP provides set of basic functions to manage content on the backend. This functionality can be customized and extended via customer request.

B BUSINESS AUTOMATION PLATFORM PRICING

Here are different collaboration plans we offer. Those are to define way of development required to build IT system for your business automation. A free trial is available to help you with the decision-making. We offer to work together for a month and create pilot project to your needs. During that month we'll collect your initial business requirements, do user interface design and finally create basic but functioning application. The cost of development is point for negotiation, prices are given below are the prices of work force of one developer per one hour. This is also possible to buy BAP product itself on exclusive or non-exclusive basis. Please contact us following the hyperlink <http://www.bap-software.com/home/contact> if you wish to get more details on that.
